Profile

Final year B.Tech Computer Science and Engineering (CSE Core) student with a strong academic foundation and a passion for technology. Interested in applying technical expertise to real-world applications while continuously learning and improving.

Education

B.Tech in Computer Science and Engineering (Core), SRM Institute of Science and Technology

2023 – Present

• CGPA 9.74/10

Technical Skills

Languages — C/C++, Python

Technologies — HTML, CSS, JavaScript, MySQL

Core CS — Data Structures, Algorithms, OOPs, DBMS, Operating System

AI/ML — Machine Learning, Data Analysis, Stable Diffusion, BLIP

Tools — Git, GitHub, VS Code, Google Colab

Projects

SignalLens - Market Change Intelligence 

01/2026 – 05/2026

- Developed a full-stack market intelligence platform that monitors stock movements and news events, delivering prioritized insights and personalized alerts.
- Built automated change-detection pipelines to identify significant market events and enrich them with relevant news-based explanations.
- Architected a PostgreSQL database for users, watchlists, events, insights, and alerts, integrating Yahoo Finance and RSS news feeds for real-time data processing.

PromptLoop: Iterative LLM-Guided Prompt Refinement for Text-to-Image Generation

07/2025 – 11/2025

- Built an end-to-end AI pipeline using Stable Diffusion, BLIP, and Gemini to automatically refine text prompts through iterative visual feedback and image regeneration.
- Designed and implemented a controlled evaluation framework comparing image-aware prompt refinement against a keyword-based baseline, measuring performance using CLIP alignment and aesthetic quality metrics.
- Developed an interactive Gradio application in Google Colab to generate images, visualize refinement iterations, and track alignment and quality score progression in real time.

Password Manager

07/2024 – 10/2024

- Developed a Java Swing desktop application for securely generating, encrypting, and managing account credentials.
- Implemented AES encryption and a SecureRandom-based password generator to protect and produce strong user passwords.
- Built a MySQL/JDBC persistence layer with parameterized queries and an interface-based DAO design for CRUD operations on stored credentials.

Certifications & Achievements

NPTEL

- Programming in Java | IIT Madras
- Introduction to Database Systems | IIT Kharagpur
- Introduction to Machine Learning | IIT Kharagpur

Samsung Innovation Campus

- Selected among 80 students for the Samsung Innovation Campus (SIC), where I completed industry training in Python, Data Structures, and Data Analytics.

Scholarships

- Founder Scholarship, SRMIST – Awarded a 100% scholarship for securing Rank 10 in SRMJEEE.
- Shiv Nadar Foundation Scholarship – Awarded a full scholarship for academic excellence from Class VI - XII.
